SHIBAWARP

WHITEPAPER

Introduction

ShibaWarp is a meme-coin inspired project designed to elevate the native Shiba Inu token to the .01 price point milestone. **ShibaWarp** is a project that will utilize two utilities to increase the value of itself, as well as the native Shiba Inu token.

1. The first utility is the buy back and burn of the native Shiba Inu token. No investor wants to spend money on a token, and then permanently burn it. For investors that's a waste of money. **ShibaWarp** tackles this problem by utilizing a percentage of its taxes to buy back the native Shiba Inu token and send it to the Shiba Inu burn wallet address permanently.

2. The second utility of **ShibaWarp** is to buy back and distribute the native Shiba Inu token to all the **ShibaWarp** holders, in accordance with their ShibaWarp holding size.

Again, buying into a project whose price point is stagnant isn't the best investing strategy, because the goal of investing is to make money and increase the value of your investments. **ShibaWarp** offers three different avenues for a positive R.O.I. to its investors.

1. We burn native Shiba Inu tokens, helping to decrease supply and increase value.

2. We distribute Shiba Inu tokens to our holder's depending on their holding size.

3. The value of the **ShibaWarp** token itself.

As the popularity of **ShibaWarp** raises, the value of the token will climb. So, holding **ShibaWarp** will not only deposit free Shiba Inu native tokens to its holders, help increase the burn rate of the native Shiba Inu token, but the intrinsic value of the **ShibaWarp** token (as determined by market conditions at any given time) will also add value to our holders' wallets.

ShibaWarp

Token Information

- **Name:** ShibaWarp
- **Symbol:** SBWP
- **Chain:** ERC 20
- **Decimals:** 18
- **Token Supply:** 375,000,000
